# Digital Forensics – Lab#10

Ahmad Abdullah – i22-1609

In this lab, we were given open ended task to find anything that could be an artifacts.

Using KeywordList we found all the URLs, CreditCards, IP Adresses and Phone Numbers saved.
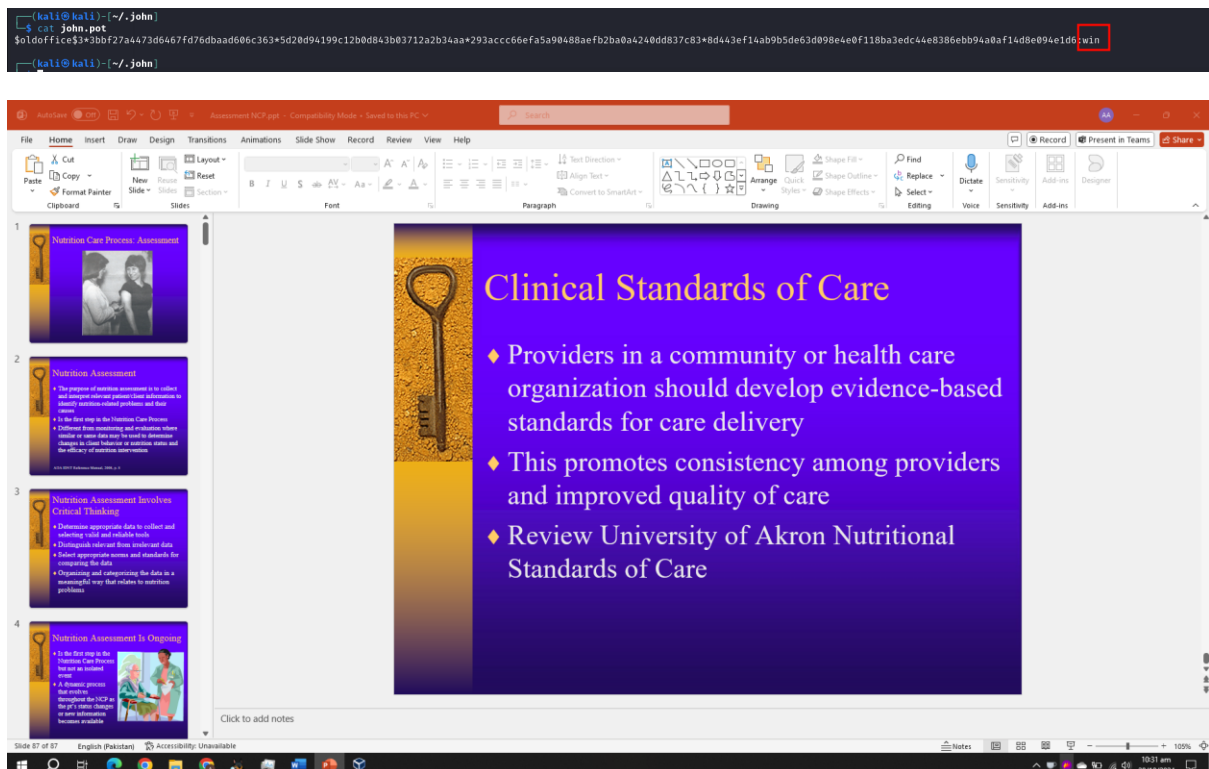

I also found a password-protected presentation 'Assessment NCP.ppt'

Extracted the ppt and found it to be locked. So i used office2john to get the hash of the file and then use JohnTheRipper to brute force the password.
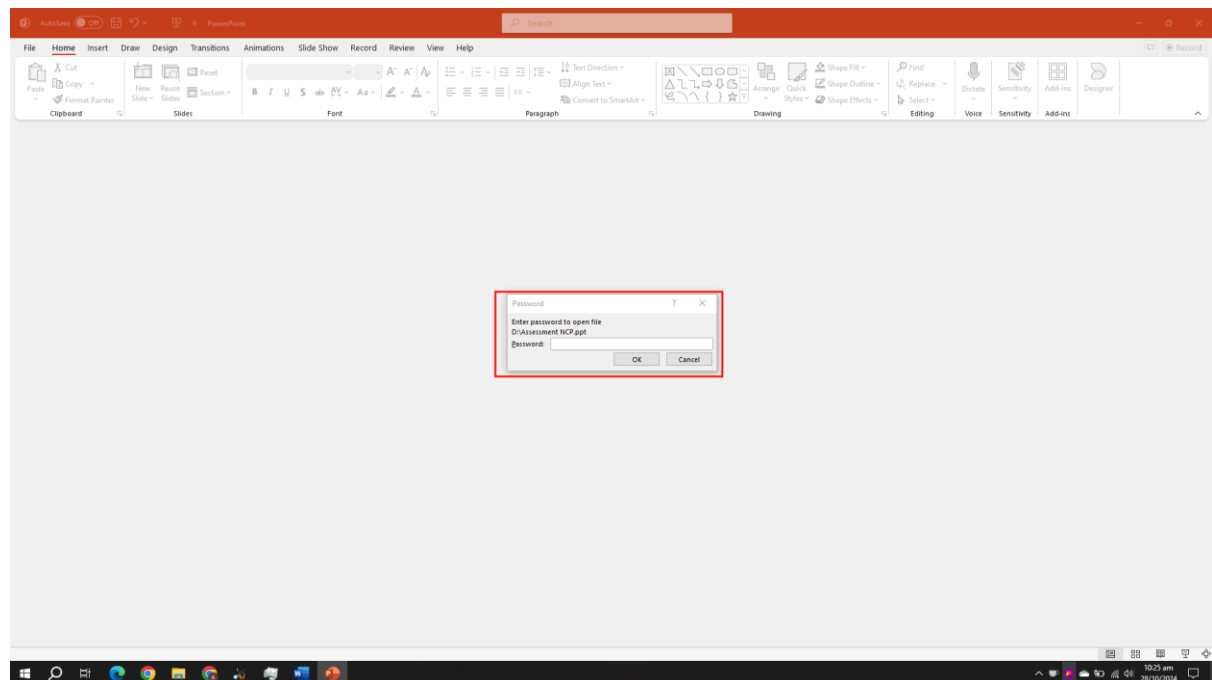

I Found the password 'win' and it opened and it was Nutrition presentation.

I also found this image of 'Beast 2.70' software which is used to remotely control a windows desktop environment and most probably by non-ethical hackers.
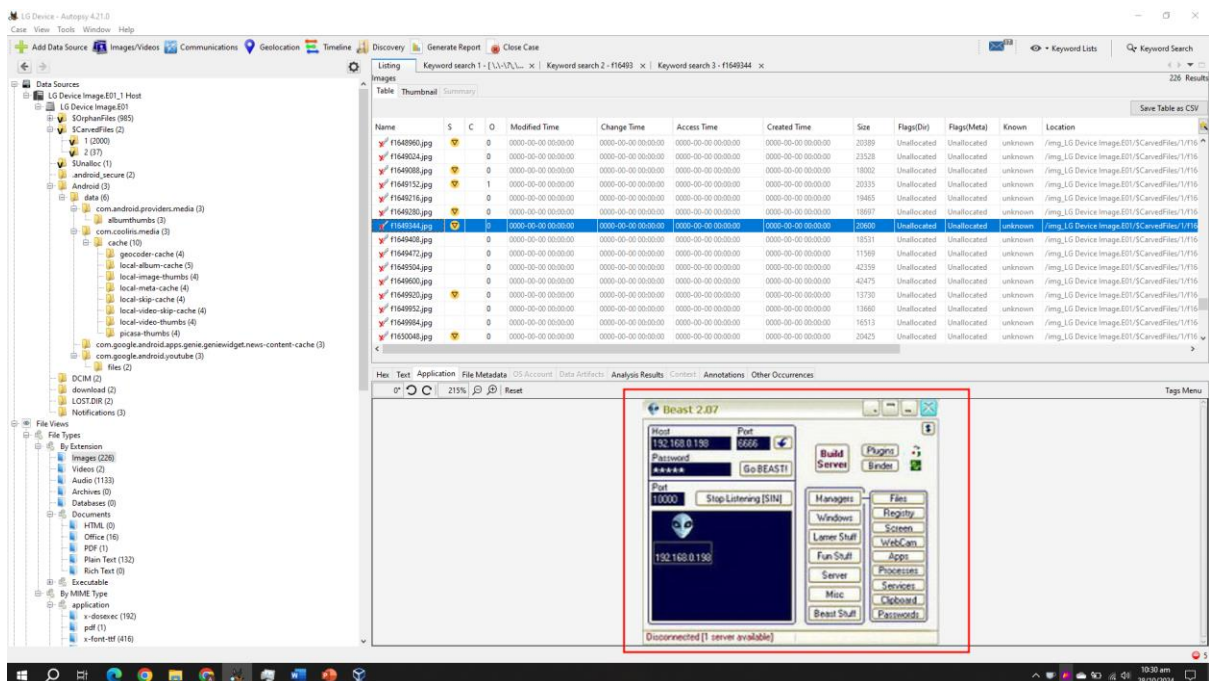

Upon searching this on google it said this was a malware.

Information's

- **Family Name:** Beast
- **Main Classification:** Remote Access
- **Release Version:** 2.07
- **Author:** Tataye
- **Origin:** Romania RO
- **Language:** Delphi
- **Default Port:** 6666
- **Release Date:** Aug, 2004, 20 years, 2 months ago.
